

The diagram illustrates the relationship between environmental factors, fitness changes, and effects on a bee's gut microbiome. It features a central illustration of a bee and a magnified view of its gut microbiome, represented by a black circle containing various white icons of microorganisms.

Environmental & Developmental Factors (Blue box on the left):

- Antibiotics, Chemicals, Climate/Season, Diet, Age/Caste, Other molecules

Fitness changes (Text above the bee):

Effects (Orange box on the right):

- Immune function, Metabolisms, Hormones/behavior, Removal of toxins, Growth/development, Pathogen susceptibility

Altered gut microbial composition (Text below the bee):

Possible consequences (Text below the orange box):

Arrows indicate the flow of information: a blue arrow from Environmental Factors to the Bee; an orange arrow from the Bee to Fitness changes; a blue arrow from the Bee to Altered gut microbial composition; an orange arrow from Fitness changes to Effects; a blue arrow from Altered gut microbial composition to Possible consequences; and a blue arrow from Possible consequences back to the Bee.

About

BeeLine browse table

This browse interface allows to discover BeeLine data. A basic search (on any field) is available at top right of the table. An **advanced search** is available to do a search on each field. More details on each field are available in our [help page](#).

Results are ordered by **Publication date**, then **BiSample** etc... The order could be changed by clicking on one column, then press shift and click on another column. Clicking on the "+" sign shows the full information for each sample.
